

#### What is the Money Market Fund?

The Money Market Fund is a pooled fund for the investor who prefers low risk investments. It has rates that are competitive and consistently higher than savings rates. The MMF is secure, as its investments are mainly in Government of Jamaica securities such as variable and fixed rate notes. The fund has a tax-free feature, whereby investors are exempt from paying withholding tax, if they declare their investments as Long-term Savings Accounts (LSAs), which operate under the following conditions:

- Maximum Deposit of J\$1,000,000 annually
- A maximum of 75% of the interest can be withdrawn prior to the maturity date
- Funds must be invested for five years

#### Outlook

The Bank of Jamaica (BOJ) hiked its main policy rate by 50 basis points to 7.00% in November 2022. The increase in policy rates has been ushered by elevated inflation which has gone outside of the BOJ's target range of 4% to 6%. The point-to-point inflation as at November 2022 was 10.3%, an uptick from the 9.9% for the prior month. Meanwhile, the BOJ has indicated that inflation was likely to remain elevated for the remainder of the calendar year. Consequently, local interest rates have moved higher with mortgages and car loans increasing over recent months. The rates on loans and corporate papers have also moved higher, though with shorter tenors or fixed to float features. The Money Market Fund is however positioned to take advantage of the higher interest rate environment, as in excess of 30% of its investments are slated to mature within 12 months and will subsequently cycle into these higher yielding securities; which will improve the yield and the return to investors. The BOJ 30-day CD has come back with yields averaging above 8% p.a. over recent months, with maximum successful bids as high as 10.5% in October; which is an indication of potentially higher interest rates in the near-term. Meanwhile, the economy continues to recover from the Covid 19 Pandemic and the ease of restrictions will likely increase the pace of recovery (though there still remain Covid risks).

*The investment strategy going forward is to opportunistically continue.*

- Participate in appropriately priced Corporate Debt Securities, with longer tenors

10-year average annual return	5-year average annual return	3-year average annual return	2021 return
4%	3%	3%	3%

- Increasingly participate in Government Offers to improve the liquidity of the fund

#### Asset Allocation
